The return population changes depending on which snapshot we use - 2023 control review

Hi team,

Regulatory Reporting needs a reproducible population of active, restricted and closed accounts with the relevant customer due-diligence fields.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2023 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Can you test these explanations rather than choosing one at the start?

- snapshot timing explains the difference
- status changes are not applied consistently
- company and individual rules are being mixed

The decision is the agreed population rule, data-quality exceptions and evidence trail. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories. The dataset can test completeness and consistency, not determine whether every document is authentic.

Thanks
