Did the retry cure the payment or duplicate it? - 2023 control review

Hi team,

Payment attempts, reversals and late postings can create apparent duplicates or genuine duplicate customer impact.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2023 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Can you test these explanations rather than choosing one at the start?

- late settlement creates false duplicates
- some customers were debited more than once before reversal
- retries are correctly linked

The decision is the matching rule, customer-impact list and preventive control. Please give us a control view with the exceptions, owner and reason each item was included.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. Statement evidence is available only for selected accounts; use transaction identifiers and timing for the full population.

Thanks
