Which branches open accounts that customers actually use? - 2023 control review

Morning,

I need help with something that sounds simple but probably is not.

Branch Network wants to separate productive onboarding from accounts that never progress beyond opening and initial deposit. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

The questions I would ask in the room are:

1. What would we expect to see if some customer types need assisted follow-up?
2. What evidence would instead support that card or online activation friction delays use?
3. How do we rule out that first useful activity varies by branch?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2023 as the new evidence point rather than recycling the earlier conclusion. Please work towards where branch coaching or onboarding process changes are needed. A useful output would be a model-ready table, data dictionary and an honest baseline.

Use monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; available initial-deposit records up to the request date; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency. One caution: Do not rank branches on raw volume without controlling for opening month, customer mix and account type.

Regards
