Are distressed customers entering the right pathway? - 2023 control review

Hi,

This came up in a working session and nobody had the same definition.

Collections needs to distinguish temporary operational failures, short-term cash-flow stress and sustained affordability problems.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: bank-side processing issues are entering collections; repeat failures and complaints indicate deeper stress; or some customers recover after payday.

Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2023 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which treatment path, contact tone and escalation should apply. Please bring a control view with the exceptions, owner and reason each item was included, including a few cases we can trace from source to conclusion.

The available evidence is collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data contains behavioural indicators, not a complete vulnerability or hardship assessment.

Thank you
