Fees and interest are not landing where Finance expects - 2023 control review

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Could the answer be that reversals are not inheriting the original reference cleanly? Or are we actually seeing that the issue is statement timing? I also do not want us to miss the possibility that the product configuration and transaction description disagree.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2023 as the new evidence point rather than recycling the earlier conclusion. The practical decision is whether Finance needs a mapping correction, a posting control or a customer remediation list. Please send a Power BI page with drill-through to a reproducible case list; I need the exceptions and counter-examples, not only an average.

Work from transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions. Do not calculate general-ledger balances; no general ledger is present.

Regards
