Where does cash access fail when customers need it most? - 2023 control review

Team,

Before this becomes another standing report, can we answer the real question?

ATM failures and blocked-card issues can shift customers toward branches, especially during infrastructure disruption. The possible stories are that customers switch to smaller withdrawals or branch contact, that specific provinces show repeat access failure, or that cash-bin or host issues dominate.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2023 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide where contingency communication and ATM support should be prioritised.

Data available: ATM attempts, host responses, PIN attempts, blocked-card state and latency; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; monthly customer and KYC snapshots.

Please state the limitation plainly: The data does not contain branch cash holdings or queue time.

Thanks
