A decline is only the first event; what did the customer do next? - 2023 control review

Team,

Before this becomes another standing report, can we answer the real question?

The same decline code can lead to a successful retry, an ATM attempt, a phone call or lost activity. The possible stories are that repeat declines cluster by card state or channel, that most declines recover immediately, or that poor explanations drive complaints more than the decline itself.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2023 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Please prepare a one-page finding note plus the underlying CSV for our own review. The output must help us decide which decline reasons need rule, message or service changes.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions.

Please state the limitation plainly: The data does not contain merchant terminal logs or card-scheme dispute outcomes.

Thanks
