Which fees create revenue, and which create avoidable exits? - 2023 control review

Team,

Before this becomes another standing report, can we answer the real question?

Pricing needs to understand whether fee complaints reflect affordability, unclear value, service failure or a genuinely poor price point. The possible stories are that complaints cluster after specific charges, that fee reversals treat symptoms without fixing the journey, or that high-use customers tolerate fees when service works.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2023 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Please prepare a Power BI page with drill-through to a reproducible case list. The output must help us decide which fee, wording, waiver or product design should be tested.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions.

Please state the limitation plainly: The data supports charges and behaviour, not a complete fee-income or cost-to-serve calculation.

Thanks
