Repricing impact by borrower, not only by product - 2023 control review

Hi team,

Loan Products needs to identify borrowers most exposed to repricing and the questions customers are likely to raise.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2023 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

Can you test these explanations rather than choosing one at the start?

- thin affordability buffers matter more than loan size
- clear communication reduces avoidable complaints
- variable-rate customers show higher payment pressure

The decision is which customers need proactive communication and which product assumptions need review. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context. Use recorded loan rates and behaviour; do not infer contractual repricing terms not present in the data.

Thanks
