Which timestamp should the analysis trust? - 2023 control review

Hi team,

A requested analysis changes depending on whether the team starts from transaction, debit-order, account-status or customer-contact records.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2023 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. The first extracts did not reconcile, which means source precedence and exclusions must be part of the answer.

Can you test these explanations rather than choosing one at the start?

- one source is updated retrospectively
- matching logic is joining unrelated records
- the sources record different stages of one event

The decision is the source precedence rule and the cases that must remain explicitly unresolved. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions. Do not force agreement by dropping exceptions; preserve contradictory evidence for owner review.

Thanks
