Before we publish, who owns this denominator? - 2023 control review

Hi,

This came up in a working session and nobody had the same definition.

Analytics is receiving requests that use the same business term for different populations, dates and customer relationships.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: the teams need different metrics; an undocumented exclusion is changing the denominator; or snapshot timing creates the difference.

Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2023 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is the governed definition, owner, exclusions and reconciliation bridge. Please bring a Power BI page with drill-through to a reproducible case list, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context. A technically consistent definition still needs business ownership and approval.

Thank you
