Audit wants the lineage, not another dashboard - 2023 control review

Hi,

This came up in a working session and nobody had the same definition.

Management reports are expanding faster than the evidence showing how each number was sourced, transformed and approved.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: manual exclusions are changing the answer; the number can be reperformed from source; or different teams use the same label for different populations.

Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2023 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which data controls must be formalised before the next assurance review. Please bring a short decision pack with no more than five slides and an attached evidence table, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions. Do not create a full enterprise lineage claim; reperform a defined metric and document every limitation.

Thank you
