Follow-up: relevance, eligibility and bad timing

Hi team,

Product wants a recommendation framework that suppresses offers after complaints, failed payments or unsuitable customer events.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2023 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure.

Can you test these explanations rather than choosing one at the start?

- recent behaviour identifies a useful product need
- service recovery should precede selling
- campaign eligibility differs from likely conversion

The decision is the decision rules and evaluation design for a controlled campaign. Please give us a Power BI page with drill-through to a reproducible case list.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. Do not train on campaign outcomes without accounting for who was selected to receive each campaign.

Thanks
