Operational volume is hiding repeat handling - 2024 control review

Hi team,

Operations wants a proxy for cases repeatedly touched across Payments, Collections, Customer Experience and Finance.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2024 as the new evidence point rather than recycling the earlier conclusion. Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause.

Can you test these explanations rather than choosing one at the start?

- a small set of exception types creates most hand-offs
- unclear ownership keeps cases open
- late posting generates downstream work

The decision is which process should be redesigned and where ownership should sit. Please give us a short decision pack with no more than five slides and an attached evidence table.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; debit-order mandates, collection dates, suspensions and cancellations. There is no work-queue or staff-time table, so report observable hand-offs and repeat events rather than labour hours.

Thanks
