Complaint closure quality and repeat harm - 2024 control review

Morning,

I need help with something that sounds simple but probably is not.

Complaint status alone may overstate resolution when the same customer returns, the transaction remains unresolved or the account closes. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

The questions I would ask in the room are:

1. What would we expect to see if resolved complaints do not recur?
2. What evidence would instead support that specific categories lead to repeat contact or attrition?
3. How do we rule out that resolution notes are generic?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2024 as the new evidence point rather than recycling the earlier conclusion. Please work towards which complaint outcomes need quality review and which root causes need fixing. A useful output would be a control view with the exceptions, owner and reason each item was included.

Use customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories. One caution: The analysis can identify recurrence and later behaviour, not customer satisfaction that was never recorded.

Regards
