Fee outcomes after failed payments - 2024 control review

Morning,

I need help with something that sounds simple but probably is not.

Compliance wants to examine charges that follow failed, reversed or delayed transactions and whether complaints were resolved consistently. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

The questions I would ask in the room are:

1. What would we expect to see if similar cases receive different remedies?
2. What evidence would instead support that fees follow customer-caused failure?
3. How do we rule out that bank-side delay creates avoidable charges?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2024 as the new evidence point rather than recycling the earlier conclusion. Please work towards whether a control, remediation population or policy clarification is required. A useful output would be a model-ready table, data dictionary and an honest baseline.

Use transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions; debit-order mandates, collection dates, suspensions and cancellations. One caution: The analysis can identify patterns and comparable cases; Compliance must interpret policy and legal obligations.

Regards
