First-contact resolution from the customer's side - 2024 control review

Hi team,

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2024 as the new evidence point rather than recycling the earlier conclusion. The operating teams agree that more journeys are failing; they disagree on whether the customer, the bank or a downstream party owns the failure. There are enough data exceptions to make a polished average dangerous; preserve the unresolved cases.

Can you test these explanations rather than choosing one at the start?

- transaction posting changed after the first answer
- the first contact did not resolve the issue
- channel handover loses context

The decision is which journeys need process redesign, clearer wording or ownership. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations. Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Thanks
