The closure file needs a defensible chronology - 2024 control review

Hi,

This came up in a working session and nobody had the same definition.

Legal needs a chronology for accounts closed or restricted where transactions, debit orders or customer contacts continued around the status change.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: the closure was operationally complete; downstream activity continued after the status event; or the main risk is poor communication rather than an incorrect decision.

Several teams are reporting more failed or retried activity than they expected, but they do not agree on the cause. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2024 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is whether the matter can be answered, remediated or requires formal legal review. Please bring a control view with the exceptions, owner and reason each item was included, including a few cases we can trace from source to conclusion.

The available evidence is monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. The analysis can reconstruct events; it cannot determine legal liability or the undisclosed reason for a risk decision.

Thank you
