Missed payment, service failure or genuine hardship? - 2024 control review

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Collections needs to distinguish temporary operational failures, short-term cash-flow stress and sustained affordability problems. Failure anecdotes are beginning to drive decisions, although retries and late posting may be making the problem look larger than the affected-customer population.

Could the answer be that some customers recover after payday? Or are we actually seeing that bank-side processing issues are entering collections? I also do not want us to miss the possibility that repeat failures and complaints indicate deeper stress.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2024 as the new evidence point rather than recycling the earlier conclusion. The practical decision is which treatment path, contact tone and escalation should apply. Please send a Power BI page with drill-through to a reproducible case list; I need the exceptions and counter-examples, not only an average.

Work from collections cases, promises to pay and recovery payments; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields. The data contains behavioural indicators, not a complete vulnerability or hardship assessment.

Regards
