Vulnerability signals and customer treatment - 2024 control review

Team,

Before this becomes another standing report, can we answer the real question?

Compliance needs an outcome view for customers who may be more exposed to failed payments, repeated fees or difficult service journeys. The possible stories are that income and collections stress identify higher exposure, that standard contact strategies create repeat complaints, or that channel access affects resolution.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2024 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide which customer-treatment controls and monitoring indicators should be introduced.

Data available: monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions.

Please state the limitation plainly: Use vulnerability indicators carefully and never use them to reduce service or exclude customers.

Thanks
