Which card declines become complaints? - 2024 control review

Hi team,

The same decline code can lead to a successful retry, an ATM attempt, a phone call or lost activity.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2024 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- most declines recover immediately
- poor explanations drive complaints more than the decline itself
- repeat declines cluster by card state or channel

The decision is which decline reasons need rule, message or service changes. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions. The data does not contain merchant terminal logs or card-scheme dispute outcomes.

Thanks
