Analytics needs a source-of-truth decision - 2024 control review

Team,

Before this becomes another standing report, can we answer the real question?

A requested analysis changes depending on whether the team starts from transaction, debit-order, account-status or customer-contact records. The possible stories are that one source is updated retrospectively, that the sources record different stages of one event, or that matching logic is joining unrelated records.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2024 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Please prepare a Power BI page with drill-through to a reproducible case list. The output must help us decide the source precedence rule and the cases that must remain explicitly unresolved.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions.

Please state the limitation plainly: Do not force agreement by dropping exceptions; preserve contradictory evidence for owner review.

Thanks
