Reperform one risk number end to end - 2024 control review

Morning,

I need help with something that sounds simple but probably is not.

Management reports are expanding faster than the evidence showing how each number was sourced, transformed and approved. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

The questions I would ask in the room are:

1. What would we expect to see if the number can be reperformed from source?
2. What evidence would instead support that different teams use the same label for different populations?
3. How do we rule out that manual exclusions are changing the answer?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2024 as the new evidence point rather than recycling the earlier conclusion. Please work towards which data controls must be formalised before the next assurance review. A useful output would be a control view with the exceptions, owner and reason each item was included.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions. One caution: Do not create a full enterprise lineage claim; reperform a defined metric and document every limitation.

Regards
