Find the cases that cross too many teams - 2024 control review

Morning,

I need help with something that sounds simple but probably is not.

Operations wants a proxy for cases repeatedly touched across Payments, Collections, Customer Experience and Finance. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

The questions I would ask in the room are:

1. What would we expect to see if late posting generates downstream work?
2. What evidence would instead support that a small set of exception types creates most hand-offs?
3. How do we rule out that unclear ownership keeps cases open?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2024 as the new evidence point rather than recycling the earlier conclusion. Please work towards which process should be redesigned and where ownership should sit. A useful output would be a control view with the exceptions, owner and reason each item was included.

Use transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; debit-order mandates, collection dates, suspensions and cancellations. One caution: There is no work-queue or staff-time table, so report observable hand-offs and repeat events rather than labour hours.

Regards
