## The avoidable-work question for EXCO - 2024 control review

---

Morning,

I need help with something that sounds simple but probably is not.

Digital use is rising, but repeat calls, branch visits and failed journeys may mean the bank is serving the same need more than once. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

The questions I would ask in the room are:

1. What would we expect to see if digital journeys are resolving customer needs?
2. What evidence would instead support that a small set of broken journeys creates most repeat contact?
3. How do we rule out that customers begin digitally and finish through an assisted channel?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2024 as the new evidence point rather than recycling the earlier conclusion. Please work towards which journeys should be fixed before another channel-adoption campaign is funded. A useful output would be a working Excel file with the exception population and clear columns.

Use transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; ATM attempts, host responses, PIN attempts, blocked-card state and latency; monthly account snapshots, status events, limits, product enrolments and signatories. One caution: The dataset can measure repeat contacts and channel sequences, not fully allocated service cost.

Regards
