## Reissue, activation and first-use journey - 2024 control review

---

Team,

Before this becomes another standing report, can we answer the real question?

Card Operations needs to know whether replacement cards become usable quickly and whether old-card attempts continue after reissue. The possible stories are that old credentials continue to generate declines, that ATM and transaction channels reflect card history differently, or that customers resume normal use quickly.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2024 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Please prepare a Power BI page with drill-through to a reproducible case list. The output must help us decide which reissue controls or customer messages need improvement.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; ATM attempts, host responses, PIN attempts, blocked-card state and latency; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions.

Please state the limitation plainly: Card numbers are historical lists in the account snapshot; use issue and expiry dates to determine the active card.

Thanks
