Account closed, but was the customer journey coherent? - 2025 control review

Hi team,

Legal needs a chronology for accounts closed or restricted where transactions, debit orders or customer contacts continued around the status change.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use January 2025 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Can you test these explanations rather than choosing one at the start?

- the main risk is poor communication rather than an incorrect decision
- the closure was operationally complete
- downstream activity continued after the status event

The decision is whether the matter can be answered, remediated or requires formal legal review. Please give us a working Excel file with the exception population and clear columns.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. The analysis can reconstruct events; it cannot determine legal liability or the undisclosed reason for a risk decision.

Thanks
