One obligation, several attempts, unclear customer impact - 2025 control review

Team,

Before this becomes another standing report, can we answer the real question?

Payment attempts, reversals and late postings can create apparent duplicates or genuine duplicate customer impact. The possible stories are that late settlement creates false duplicates, that some customers were debited more than once before reversal, or that retries are correctly linked.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2025 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide the matching rule, customer-impact list and preventive control.

Data available: transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions.

Please state the limitation plainly: Statement evidence is available only for selected accounts; use transaction identifiers and timing for the full population.

Thanks
