The bank should not confuse low income with low value - 2025 control review

Team,

Before this becomes another standing report, can we answer the real question?

Compliance needs an outcome view for customers who may be more exposed to failed payments, repeated fees or difficult service journeys. The possible stories are that standard contact strategies create repeat complaints, that channel access affects resolution, or that income and collections stress identify higher exposure.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use February 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Please prepare a model-ready table, data dictionary and an honest baseline. The output must help us decide which customer-treatment controls and monitoring indicators should be introduced.

Data available: monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions.

Please state the limitation plainly: Use vulnerability indicators carefully and never use them to reduce service or exclude customers.

Thanks
