Correspondent concentration, delay and alert volume

Team,

Before this becomes another standing report, can we answer the real question?

A small set of intermediary banks appears in settlement delays and routing alerts, raising both service and risk questions. The possible stories are that beneficiary patterns explain the alerts, that the operational and financial-crime populations overlap only partly, or that one intermediary drives most delay.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Please prepare a short decision pack with no more than five slides and an attached evidence table. The output must help us decide whether to escalate the correspondent, change monitoring or gather contractual evidence.

Data available: SWIFT messages, correspondent alerts and nostro breaks; transaction-level timestamps, channels, amounts, statuses and error context.

Please state the limitation plainly: Exception files do not contain the full correspondent contract or all successful traffic.

Thanks
