The account is open; the relationship never started - 2025 control review

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Product wants to understand why some customers make an initial deposit but fail to establish recurring activity. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Could the answer be that the account was opened for a one-off purpose? Or are we actually seeing that activation friction causes early dormancy? I also do not want us to miss the possibility that fees or a failed first journey discourage use.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use March 2025 as the new evidence point rather than recycling the earlier conclusion. The practical decision is which onboarding intervention or product proposition should be tested. Please send a working Excel file with the exception population and clear columns; I need the exceptions and counter-examples, not only an average.

Work from monthly account snapshots, status events, limits, product enrolments and signatories; available initial-deposit records up to the request date; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; customer contacts, complaints and suggestions. The data cannot observe the customer's relationship with competing banks.

Regards
