Bundle uptake versus useful activity - 2025 control review

Hi team,

Product bundles are recorded at account level, but Pricing needs to know whether customers use optional features and remain active.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2025 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Can you test these explanations rather than choosing one at the start?

- optional products deepen activity
- some bundles increase service contact without increasing use
- default products are mistaken for cross-sell

The decision is which bundle components should be retained, repriced or removed from campaigns. Please give us a short decision pack with no more than five slides and an attached evidence table.

You should be able to build the evidence from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; campaign design and customer responses. Product enrolment is not the same as product usage; define observable use before measuring adoption.

Thanks
