Document gaps, risk and account activity - 2025 control review

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Could the answer be that company ownership and cross-border activity create distinct needs? Or are we actually seeing that many document gaps belong to inactive or closed accounts? I also do not want us to miss the possibility that higher-risk active accounts should lead.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use April 2025 as the new evidence point rather than recycling the earlier conclusion. The practical decision is the refresh sequence, exclusion rules and customer-contact approach. Please send a one-page finding note plus the underlying CSV for our own review; I need the exceptions and counter-examples, not only an average.

Work from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context. Completeness fields do not prove document validity or current legal sufficiency.

Regards
