Which exceptions quietly become old? - 2025 control review

Morning,

I need help with something that sounds simple but probably is not.

Operations needs an ageing view that prioritises unresolved customer impact rather than raw exception count. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

The questions I would ask in the room are:

1. What would we expect to see if older cases cluster in one process?
2. What evidence would instead support that status updates close records without resolving the transaction?
3. How do we rule out that small-value cases remain open because ownership is unclear?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2025 as the new evidence point rather than recycling the earlier conclusion. Please work towards the exception priority rule and escalation threshold. A useful output would be a short decision pack with no more than five slides and an attached evidence table.

Use transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions; collections cases, promises to pay and recovery payments; monthly account snapshots, status events, limits, product enrolments and signatories. One caution: Use observable dates and outcomes; do not infer internal queue age where no queue record exists.

Regards
