Can one management number be traced back to source? - 2025 control review

Team,

Before this becomes another standing report, can we answer the real question?

Management reports are expanding faster than the evidence showing how each number was sourced, transformed and approved. The possible stories are that manual exclusions are changing the answer, that the number can be reperformed from source, or that different teams use the same label for different populations.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2025 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Please prepare a working Excel file with the exception population and clear columns. The output must help us decide which data controls must be formalised before the next assurance review.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions.

Please state the limitation plainly: Do not create a full enterprise lineage claim; reperform a defined metric and document every limitation.

Thanks
