The queue may begin outside the branch - 2025 control review

Hi team,

Regional managers suspect that statement requests, card problems and failed digital journeys are creating avoidable branch demand.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use May 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- customers prefer branch for complex needs
- service failures drive repeat visits
- specific communications fail to explain the next step

The decision is which demand should be removed, redirected or staffed differently. Please give us a control view with the exceptions, owner and reason each item was included.

You should be able to build the evidence from customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; monthly account snapshots, status events, limits, product enrolments and signatories. There is no branch queue-time or staff-roster table; infer demand drivers, not staffing productivity.

Thanks
