Which fields belong in the shared analytical view? - 2025 control review

Team,

Before this becomes another standing report, can we answer the real question?

Teams are asking for customer identity, risk, income and contact fields in broad analytical extracts. The possible stories are that most use cases need derived or masked fields, that different projects require different retention and access, or that restricted identifiers are being copied for convenience.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use June 2025 as the new evidence point rather than recycling the earlier conclusion. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide the shared schema, restricted extension and audit trail.

Data available: monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; customer contacts, complaints and suggestions.

Please state the limitation plainly: Minimise access to identity, contact, protected and investigation fields; usefulness alone is not a lawful purpose.

Thanks
