Which relationships look valuable before full profitability exists? - 2025 control review

Morning,

I need help with something that sounds simple but probably is not.

Finance needs a customer-value proxy for planning, but a full profitability engine and cost allocation are not available. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

The questions I would ask in the room are:

1. What would we expect to see if recurring inflows and product depth identify durable value?
2. What evidence would instead support that high activity is being offset by service and fee friction?
3. How do we rule out that some low-volume relationships are strategically valuable because of loan or deposit behaviour?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use July 2025 as the new evidence point rather than recycling the earlier conclusion. Please work towards how to segment relationships for planning without pretending the proxy is accounting profit. A useful output would be a Power BI page with drill-through to a reproducible case list.

Use monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions; campaign design and customer responses. One caution: Label the result as a value proxy. It is not net interest margin, return on equity or customer profitability.

Regards
