Why did the customer have to ask twice? - 2025 control review

Team,

Before this becomes another standing report, can we answer the real question?

Customer Experience wants to understand which issues return within days and whether the customer changes channel to get an answer. The possible stories are that the first contact did not resolve the issue, that transaction posting changed after the first answer, or that channel handover loses context.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2025 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Please prepare a working Excel file with the exception population and clear columns. The output must help us decide which journeys need process redesign, clearer wording or ownership.

Data available: customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; debit-order mandates, collection dates, suspensions and cancellations.

Please state the limitation plainly: Communication records do not contain every call recording or agent action, so measure observable repeat contact.

Thanks
