We have three definitions of active customer - 2025 control review

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Analytics is receiving requests that use the same business term for different populations, dates and customer relationships. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Could the answer be that snapshot timing creates the difference? Or are we actually seeing that the teams need different metrics? I also do not want us to miss the possibility that an undocumented exclusion is changing the denominator.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use August 2025 as the new evidence point rather than recycling the earlier conclusion. The practical decision is the governed definition, owner, exclusions and reconciliation bridge. Please send a control view with the exceptions, owner and reason each item was included; I need the exceptions and counter-examples, not only an average.

Work from monthly account snapshots, status events, limits, product enrolments and signatories; monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context. A technically consistent definition still needs business ownership and approval.

Regards
