What happens after a card is replaced? - 2025 control review

Morning,

I need help with something that sounds simple but probably is not.

Card Operations needs to know whether replacement cards become usable quickly and whether old-card attempts continue after reissue. The discussion is currently being driven by anecdotes, and the teams involved are describing the same customers differently.

The questions I would ask in the room are:

1. What would we expect to see if old credentials continue to generate declines?
2. What evidence would instead support that ATM and transaction channels reflect card history differently?
3. How do we rule out that customers resume normal use quickly?

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use September 2025 as the new evidence point rather than recycling the earlier conclusion. Please work towards which reissue controls or customer messages need improvement. A useful output would be a short decision pack with no more than five slides and an attached evidence table.

Use monthly account snapshots, status events, limits, product enrolments and signatories; ATM attempts, host responses, PIN attempts, blocked-card state and latency; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions. One caution: Card numbers are historical lists in the account snapshot; use issue and expiry dates to determine the active card.

Regards
