Are our standard processes producing worse outcomes for vulnerable customers? - 2025 control review

Hi team,

Compliance needs an outcome view for customers who may be more exposed to failed payments, repeated fees or difficult service journeys.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- channel access affects resolution
- income and collections stress identify higher exposure
- standard contact strategies create repeat complaints

The decision is which customer-treatment controls and monitoring indicators should be introduced. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from monthly customer and KYC snapshots; transaction-level timestamps, channels, amounts, statuses and error context; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions. Use vulnerability indicators carefully and never use them to reduce service or exclude customers.

Thanks
