Which service fails first under operating stress? - 2025 control review

Hi team,

The resilience plan lists systems, but customers experience end-to-end services that cross ATM, card, transaction and communication processes.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- recovery restores authorisation before posting catches up
- manual workarounds create later reconciliation breaks
- cash access degrades before account servicing

The decision is the order in which critical services should be recovered and tested. Please give us a one-page finding note plus the underlying CSV for our own review.

You should be able to build the evidence from transaction-level timestamps, channels, amounts, statuses and error context; ATM attempts, host responses, PIN attempts, blocked-card state and latency; customer contacts, complaints and suggestions; debit-order mandates, collection dates, suspensions and cancellations. Treat this as a historical service-impact rehearsal, not proof of infrastructure capacity.

Thanks
