Before Legal responds, show exactly what happened to the account - 2025 control review

Hi all,

I may be joining dots that do not belong together, so please challenge the premise.

Legal needs a chronology for accounts closed or restricted where transactions, debit orders or customer contacts continued around the status change. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Could the answer be that downstream activity continued after the status event? Or are we actually seeing that the main risk is poor communication rather than an incorrect decision? I also do not want us to miss the possibility that the closure was operationally complete.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2025 as the new evidence point rather than recycling the earlier conclusion. The practical decision is whether the matter can be answered, remediated or requires formal legal review. Please send a control view with the exceptions, owner and reason each item was included; I need the exceptions and counter-examples, not only an average.

Work from monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; debit-order mandates, collection dates, suspensions and cancellations; customer contacts, complaints and suggestions. The analysis can reconstruct events; it cannot determine legal liability or the undisclosed reason for a risk decision.

Regards
