Fees and interest are not landing where Finance expects - 2025 control review

Hi,

This came up in a working session and nobody had the same definition.

A small number of fee and interest items appear difficult to trace from the transaction record to the customer-facing statement.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: the issue is statement timing; the product configuration and transaction description disagree; or reversals are not inheriting the original reference cleanly.

There is no confirmed problem yet; this is a request to test an assumption before it becomes policy. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use October 2025 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is whether Finance needs a mapping correction, a posting control or a customer remediation list. Please bring a working Excel file with the exception population and clear columns, including a few cases we can trace from source to conclusion.

The available evidence is transaction-level timestamps, channels, amounts, statuses and error context; monthly account snapshots, status events, limits, product enrolments and signatories; the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; customer contacts, complaints and suggestions. Do not calculate general-ledger balances; no general ledger is present.

Thank you
