Which fees create revenue, and which create avoidable exits? - 2025 control review

Team,

Before this becomes another standing report, can we answer the real question?

Pricing needs to understand whether fee complaints reflect affordability, unclear value, service failure or a genuinely poor price point. The possible stories are that fee reversals treat symptoms without fixing the journey, that complaints cluster after specific charges, or that high-use customers tolerate fees when service works.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use November 2025 as the new evidence point rather than recycling the earlier conclusion. Please start with the decision we need to make, then show whether the available evidence is strong enough to support it.

Please prepare a control view with the exceptions, owner and reason each item was included. The output must help us decide which fee, wording, waiver or product design should be tested.

Data available: monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context; customer contacts, complaints and suggestions.

Please state the limitation plainly: The data supports charges and behaviour, not a complete fee-income or cost-to-serve calculation.

Thanks
