Repricing impact by borrower, not only by product - 2025 control review

Hi,

This came up in a working session and nobody had the same definition.

Loan Products needs to identify borrowers most exposed to repricing and the questions customers are likely to raise.

I do not want a dashboard that simply counts the outcome. Start with the competing explanations: variable-rate customers show higher payment pressure; clear communication reduces avoidable complaints; or thin affordability buffers matter more than loan size.

There is no confirmed problem yet; this is a request to test an assumption before it becomes policy. This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2025 as the new evidence point rather than recycling the earlier conclusion.

What we need to decide is which customers need proactive communication and which product assumptions need review. Please bring a short decision pack with no more than five slides and an attached evidence table, including a few cases we can trace from source to conclusion.

The available evidence is the latest closed loan files available by the request date, including affordability, pricing and origination risk fields; collections cases, promises to pay and recovery payments; customer contacts, complaints and suggestions; transaction-level timestamps, channels, amounts, statuses and error context. Use recorded loan rates and behaviour; do not infer contractual repricing terms not present in the data.

Thank you
