Which customer records genuinely need KYC attention first? - 2025 control review

Hi team,

A blanket refresh would create unnecessary customer friction, so Compliance wants a defensible prioritisation.

This has returned because the previous answer was useful but not strong enough to become a standing rule. Use December 2025 as the new evidence point rather than recycling the earlier conclusion. There is no confirmed problem yet; this is a request to test an assumption before it becomes policy.

Can you test these explanations rather than choosing one at the start?

- company ownership and cross-border activity create distinct needs
- higher-risk active accounts should lead
- many document gaps belong to inactive or closed accounts

The decision is the refresh sequence, exclusion rules and customer-contact approach. Please give us a model-ready table, data dictionary and an honest baseline.

You should be able to build the evidence from monthly customer and KYC snapshots; monthly account snapshots, status events, limits, product enrolments and signatories; transaction-level timestamps, channels, amounts, statuses and error context. Completeness fields do not prove document validity or current legal sufficiency.

Thanks
