KB 202010 suspicious activity view

Hi,

Can we get a better view of suspicious activity without mixing it up with normal bank processing delays?

For example, a late statement posting should not become a fraud case. But a new device, strange location, rapid transfer or card testing pattern should be visible.

Could you put together an Excel file I can filter myself with high, medium and low priority cases? It would help if we can click from the summary to the transactions behind it.

This does not need to be final for model use. It is for the operations team to review.

Aisha
