

Conduct teams press for clearer evidence on fees and failed payments

By Ed Stoddard | 14 November 2020

Compliance evidence and customer fee documentation

Conduct-risk teams are asking banks to improve the evidence trail behind fees, failed debits and delayed postings.

The concern is not only whether customers were charged correctly, but whether a bank can explain the sequence of events clearly. Compliance specialists say this becomes difficult when payment retries, bank statement postings and customer communication records sit in separate systems.

"Customers do not care which internal platform created the entry," said one compliance adviser. "They want to know why money moved, why a fee appeared, and whether the bank acted fairly."

Industry observers said the next wave of compliance reporting will need to connect source records, customer impact and exception categories in one view, particularly where late processing creates confusion around account balances.
